Review

"This is an excellent book! This really is a new stitch for beading. THIS BOOK is fabulous!" - Jamie Eakin Cloud

"Diamond Weave is a fabulous guide to the beading technique of that name. Cath and Gerlinde have created a wonderful selection of projects to help you to learn the different facets of this technique. The book gives excellent explanations, with clear diagrams, and it will take you from the basic technique through to different variations, including embellishment and use of different bead types to create different shapes and structures." - Bead Magazine - February/March 2016

"...if you are already familiar with RAW, forget everything you know about this technique! [...] the method of construction is so very different: much simpler and with a lovely flow once you have understood it. Diamond Weave is a stitch that is hugely flexible with exciting possibilities." - Katie Dean, editor of Bead & Jewellery UK

"Yes, there are 23 projects in this book for you to follow, but what you also get is a thorough introduction to a new beading stitch - diamond weave - that can provide the basis for a lifetime of beading adventures. [...] If you are craving a stitch that will let you play with possibilities (referred to as Variations by the authors), you will find DW up to the challenge." - Carol Dean Sharpe

About the Author

Cath Thomas: Multiple award-winning beader and published designer, Cath started beading more than 10 years ago. She sees it as a Zen activity guided by the Universe, to create dimensional paintings or objects with big pixels. With a subtle minimalist approach, Cath often creates designs using creative game tactics and rules. She mixes off-loom beading, bead embroidery and mixed media elements resulting in little intricate delights, pieces which convey a feeling, sensation, emotion, or chant nature. Cath grew up in the

Netherlands and Switzerland. She graduated with a foreign languages degree. Cath worked for an environmental NGO until due to fibromyalgia she became intolerant to direct natural and artificial light. She took all the photographs for this book without lamps or direct sunlight in her northeast exposed apartment in Gland, near beautiful Lake Geneva.

Gerlinde Lenz: In 1988, Gerlinde invented how to make bead-woven models of Plato's 'ideal solids', along with numerous derivations thereof. 'Geometric Jewels' became the brand name for her jewelry based on these self-supporting beaded beads. In 2004, she invented Diamond Weave in response to a challenge. She has found other new weaves since then, but none as incredibly versatile as this one. Her approach to bead weaving is technical, usually led by the question: 'Can I?' This book is her dream come true, because now you can work and play with Diamond Weave too. From a German family of scientists and engineers, she was introduced to bead weaving as well as to Platonic solids in childhood. She studied Biology and Chemistry and worked as a technical assistant in scientific labs in Germany and Australia.

SPECTACULAR and Marvelous!

By Darcy

I have had the opportunity to read this book in many of its stages during its process. It has been hard for me to squelch my excitement about this book and what it introduces to the world while waiting for it to be finalised.

Now that its here..... I am ready to share my thoughts.

It is not often the beading world gets a new stitch to learn. We get new ideas sometimes on combining stitches, using them in new ways but it is rare indeed to see the invention of a totally new stitch. Here is it though a completely new thread path thanks to Gerlinde Lenz and her innovation. Cath Thomas then brings it all to life. Explains it in detail.. shows us with graphs and photos how to work with it and provides us with all the basics, clear projects and inspiration to propel our understanding of how to do it. Diamond Weave is totally new, works up fast and is pleasing to the eye. The possibilities of combing it with other stitches is endless. There is inspiration here for you to take it where your heart goes in your own beadwork. It's simply fabulous. Not just fabulous because the stitch has a rhythm you can get into but its fabulous to have something new to play around with.

You can't go wrong ever when learning something new and you cant go wrong now with this amazingly easy to learn stitch that will add new dimensions to your own work.

Kudos to you Cath Thomas and Gerlinde Lenz for a job well done. I for one thank you!

I have had the privilege of reading draft copies and the final book is beautiful. Once I understood the basics I couldn't wait .

By Karen Beningfield

As someone who loves books and who loves beads, I was intrigued to hear about a new stitch.

I have had the privilege of reading draft copies and the final book is beautiful. Once I understood the basics I couldn't wait to bead more and more pieces with different beads! I love the way one can paint pictures using small round beads such as pearls or pressed glass beads. Imagine my delight to at last find a way to use the tiny semiprecious beads in my stash.

Cath and Gerlinde have taken time to explore many of the possibilities of this unique thread path. This book takes one on a journey of discovery starting with the basics and including many variations. There are many photographs and the instructions include words as well as detailed illustrations.

Diamond weave is extremely versatile and the book includes variations of Diamond weave using cylinder beads and seed beads.

This is an Excellent book!

By Jamie C. Eakin

This is an excellent book! This really is a new stitch for beading. There has been some who say it is a variation of RAW but that is like saying brick stitch is a variation of peyote. So... what makes this an excellent book? The explanations and illustrations are clear and precise. The basic stitch is clear and there are interesting projects. Then, there are MANY variations, again with interesting projects. There is a complete exploration of the stitch which provides Hours of interesting beading fun and inspiration. It is everything you want in a beading book. If you don't like the stitch, then that is your opinion of the stitch, but in terms of what a beading book should be, THIS BOOK is fabulous!
