interesting but the book is small

By Nayeli Arias- Bedolla

is a book for readers. It is for children 7 y/o and up; it has facts that small children could not understand yet, the book is about 5" by 8" approximately, so the pictures inside are not for reading to a group, but individually, however has lots of information about the water cycle and where is the water that we drink come from. The pictures and the information blend in the pages making interesting, a little too much information in some pages make the early reader tired by the middle of the book, probably it is better for them to be readed by an adult at the same time he explain the new vocabulary.
